Why choose for Lithuanian products?

Lithuania has a deep rooted tradition in the manufacturing of machinery and equipment. Lithuania's machinery and equipment production was leader in its field in the former Soviet Union. Currently Lithuania is an established regional leader in the production of machinery and equipment.

The Lithuanian machinery sector is dominated by small and medium enterprises which have the flexibility to respond quickly and efficient to changing market circumstances. Lithuanian machinery and equipment companies produce their own high-quality machinery, but also supply major international brands in the

automotive, agricultural machinery, defense, medical equipment, offshore, shipbuilding and aviation industries.

Machinery and equipment companies have quality and environmental management systems, most notably ISO 9001:2000 and ISO 14001:2004. Lithuania is home to the biggest technical university in the Baltic States in which 17,000 students are enrolled. The combination of relatively low labor costs and sophisticated automation systems gives Lithuanian machinery and equipment an attractive price/quality ratio.

The most notable example of Lithuanian expertise and craftsmanship in machinery and equipment is refrigerator manufacturer Snaigė. Snaigė is the only refrigerator manufacturer in the Baltic region. Their modern and energy efficient products are exported to almost 30 countries in the world.

Lithuanian machinery and equipment companies are actively conducting supply chain management. It is possible to deliver complete products, including design, logistics and aftercare. Lithuania's advantageous geographical location, well-developed infrastructure and excellent logistics guarantee short delivery times.

Type of activities

Manufacturing of diesel engines, compressors, fuel pumps, refrigerators, freezers, agricultural machinery, molding boxes, machinery parts.

Main exporting companies

AB Astra, GTV mokslinių paslaugų firma, AB Snaigė, AB Rokiškio mašinų gamykla.
